

# Microsurgery Training Scholarship

Powered by Kent Scientific

Kent Scientific understands that a little financial aid can go a long way for students and academic researchers. This is why they are delighted to offer in-lab training scholarships to select researchers who are utilizing *in vivo* rodent models in their research and are looking to sharpen their skills at the bench!

## How it Works

Register for the [training course](#) that suits your needs and share your research goals with our team. Ensure that you confirm your eligibility for the scholarship by filling out all required fields and providing a detailed research summary.

Course organizers will review all registrations and will contact you if you are eligible to receive a scholarship. If you are selected, you will then arrange to attend the course of your choosing and the scholarship award will be applied to your registration fee.

After you attend your training, you will be asked to participate in an interview about the training course that will appear on various social media channels. If you are not comfortable appearing on social media channels, please let us know.

For further questions about the scholarships available or the training courses, please contact Sarah McFarlane: [smcfarlane@scientist.com](mailto:smcfarlane@scientist.com)
